

ENHANCE YOUR CMMS WITH IOT REMOTE MONITORING & ALARM MANAGEMENT CAPABILITIES

Integrate Maintenance Connection with Observe

To operate effectively in 2023 and beyond, your technicians and managers need to be able to consolidate asset data (mechanical or electrical), manage alarms, and react effectively to changes in conditions – no matter where they are. This requires integrated systems and multi-site, remote capabilities – which is why we offer this CMMS/IoT Closed Loop Integration.

Effective Alarm Management

Use alarm filtering and notifications to make sure your teams are aware of asset status.

Work Order Prioritization

Utilize sensor and alarm information to ensure proper prioritization of work orders.

Simplified Compliance

Ensure that asset problems are resolved and properly documented to maintain ongoing compliance.
