# REDEFINE ASSET MANAGEMENT IN YOUR HEALTHCARE OPERATIONS

HTM and HFM professionals are under constant pressure to adopt advanced technology to navigate ever-changing regulations, maintain equipment availability, enhance cybersecurity, and ensure patient safety - all while managing operational and labor complexities.

Asset downtime, inefficient workflows, poor user experience, inaccurate data, and limited mobile capabilities hinder timely completion of critical work, increasing risks and costs.

Accruent's TMS, a purpose-built CMMS for healthcare since 1995, integrates cutting-edge innovations to empower healthcare professionals to address these challenges more effectively.

### Streamline User Experience
A modern, intuitive, and mobile-first interface offers healthcare facilities and clinical engineering teams superior experiences, maximizing user adoption and overall operational performance.

### Ensure Efficiency
Achieve seamless workflows and real-time data with out-of-the-box asset management tools and end-to-end work order management, accelerating processes and boosting maintenance performance.

### Improve Compliance and Cybersecurity
Seamlessly integrate with leading cybersecurity solutions, ensure high security standards, and improve compliance through enhanced data integrity and precise documentation.

### Boost ROI and Patient Quality of Care
Reduce total cost of ownership through higher digital adoption and leaner maintenance practices, driving superior asset management programs, increasing ROI, and delivering outstanding patient care.

# INNOVATIVE TOOLS AND INTERFACES FOR SUPERIOR ASSET MANAGEMENT

### Beautifully Designed Interface

An innovative, highly configurable, browser-agnostic and user-friendly interface ensures compatibility across various operating systems and devices. Increase scalability, reduce technical constraints, and foster greater adoption and efficiency.
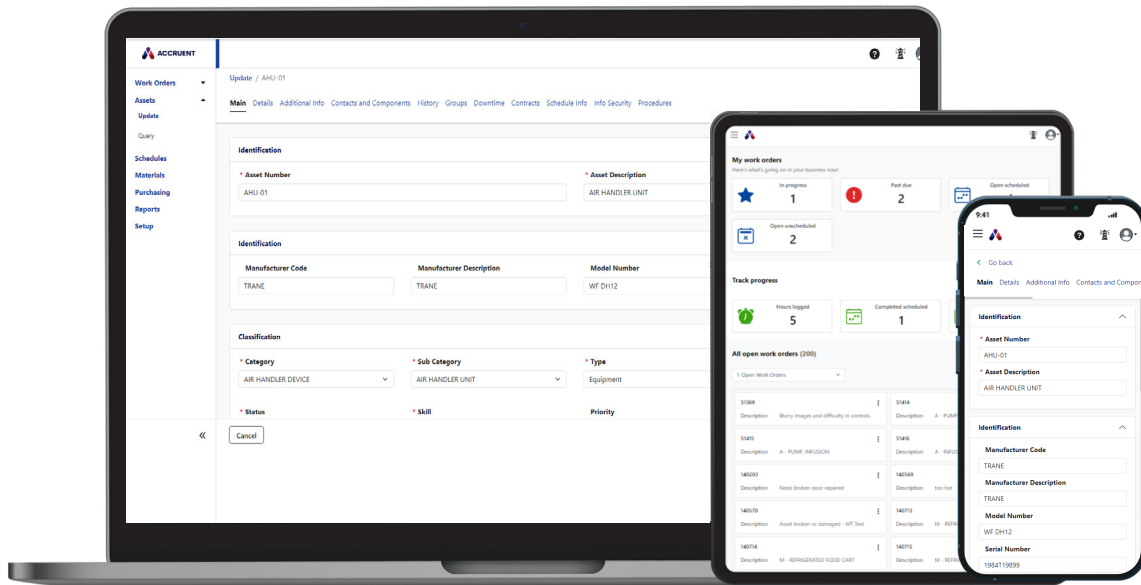

### Cutting-edge Asset Management Tools

Advanced tools streamline asset management by simplifying asset creation and editing, clearly identifying asset status, warranty and maintenance due dates, and allowing real-time updates of asset data during work order processing. Users can easily access asset details through the work order asset grid, individual asset views, or to track asset lifecycles and costs seamlessly.

### Asset Scanning

The ability to scan an asset, using barcodes or QR codes, immediately enables technicians to efficiently find the asset history, make updates, and create or view open work orders, when scanning an asset, improving data integrity and overall maintenance efficiency.

# ACCRUENT'S CENTRAL AUTHENTICATION VERSION 3

Accruent's new Single Sign-On and Managed User Authentication solution leverages your organizations identity provider for authentication, providing secure access without storing passwords. It ensures reliable communications, meets high security standards, and enhances compliance.

# ENSURE PATIENT SAFETY AND THE HIGHEST QUALITY OF CARE

The new TMS platform is transforming healthcare operations. By leveraging advanced technologies and best practices, it provides an intuitive, highly configurable, and mobile-friendly platform that simplifies work order and asset workflows from creation to completion, optimizing asset availability. Additionally, it ensures compliance and robust cybersecurity while helping facilities and clinical engineering meet daily production expectations, contributing towards a more efficient, patient-centric healthcare future.

# CONTINUOUS INNOVATION IN YOUR SYSTEM

With the new Accruent TMS, you receive regular updates and periodic major upgrades, introducing further innovations to the platform. This continuous enhancement provides a clear roadmap and predictable timeframes, setting expectations and driving transformation in your maintenance plans, ultimately boosting facilities and asset management strategies for more effective asset lifecycle management.
