

ANALYSE MODULE

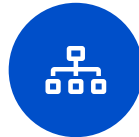

Track, Manage, and Analyse Your Global Real Estate Portfolio

Struggling to compile your space data and utilise it to make informed big-picture insights?

Eliminate siloes and demystify your most important real-time metrics – like lease & maintenance costs, space utilisation, and headcount – by consolidating data from all your tools into Analyse's integrated, comprehensive dashboards.

Get an at-a-glance understanding of your most important metrics

Free up your team's time so they can focus on the work that matters most

Avoid guesswork and missed opportunities with comprehensive information

Get an accurate, easy-to-view understanding of your real estate portfolio

STOP SIFTING THROUGH DATA. START ACTING ON INSIGHTS.

By consolidating disparate workplace, lease, and maintenance data into one comprehensive “mission control” dashboard, Analyse equips your team with the trustworthy information they need to align business objectives, reduce risk, and drive operational efficiency.

Gain At-a-Glance Insights Using the Global View

Get an at-a-glance understanding of space utilisation across your entire portfolio. Compare performance across sites and drill down into key metrics like average utilisation, lease expiration dates, and more.

Drill Down at the Building Level in the Location View

At the building level, drill down into more useful information, like lease dates & dollars, utilisation by employee type, operating costs, and utilisation trends over time or across departments. Then, get site-specific alerts and recommendations that will help improve operations.

Utilise Heat Maps and Booking Data in the Floor View

Gain access to floor level metrics like space utilisation, occupancy, square footage, and maintenance & utility costs. Use heat maps and bookings data to understand how your team is moving through a space, what your most popular areas are, and which zones are fully underutilised.

CONSIDER ALL ACCRUENT SPACE INTELLIGENCE SOFTWARE MODULES

Once you understand your current data and areas of improvement, use the **Plan** module's digital environment to evaluate future needs, make virtual changes, and review their impact before you implement new strategies in the real-world.
