

Improve Facility Management with Benchmarking

Current Performance

Understanding if your building performs above or below identified, optimal energy thresholds will allow you to make crucial decisions regarding any changes that should be made.

SUPPORTING FACT

Improving commercial inefficiencies could eliminate up to 20% of wasted energy.

Objectives and Process

Set clear objectives and define your process methodology in order to collect and analyze data to determine if there are any gaps. Gaps will allow for deeper analysis into how to recalibrate existing processes.

SUPPORTING FACT

10% of companies only use internal benchmarking (comparing a single operation within your organization to another).

Budget Justification

Competing facilities may have implemented occupancy sensors which directly impacts their utility bill. Revisiting what your company has identified as best practices may help your facility run better.

SUPPORTING FACT

Average number of sq. ft. allocated per office worker = 309.74
